**THE LOW MAINTENANCE FENCING SYSTEM
THAT COMBINES STYLE AND DURABILITY**

bisoncompositefencing.co.uk

BISON
COMPOSITE FENCING

Bison Composite Fencing combines strength, durability and style in an innovative yet easy to install system.

IT'S COST-EFFECTIVE

Unlike wooden fencing, Bison Composite Fencing won't deteriorate and need regular maintenance. Our composite fencing is fade resistant due to its strong UV resistance & won't rot or splinter, meaning no painting, staining and very little maintenance throughout its life expectancy, which will far exceed its industry leading 20 year manufacturer warranty.

IT'S HARDWEARING

The Bison fencing system uses powder coated aluminium posts that won't twist or warp like timber posts, making the system far stronger and able to withstand all elements better than traditional fencing. The structured WPC fencing planks are likewise extremely strong, being a composite material they don't absorb water and won't warp, neither will they provide conditions that promote fungal & mould growth which timber fencing does.

IT'S EASY TO INSTALL

Bison fencing is a well-designed system with minimal components to ensure an easy and fast installation. Once your fence posts are set, the rails and planks slot easily into place which makes it simple to install for both DIY enthusiasts & experienced trade professionals.

IT'S UNIQUE

Bison is unlike most other composite fencing systems in that it isn't restricted to straight or right-angled fence lines. Our unique angled post trims allow your fence to be set at either 135° or 157° to help follow the boundary of your property instead of squaring it off, making the most of your garden space. Bison Fencing planks can also be layered with a horizontal gap in between to afford a view of your surroundings without spoiling your privacy.

IT'S ENVIRONMENTALLY FRIENDLY

Bison composite fence planks are made from 95% recycled materials (a combination of recycled wood fibres and plastic) All posts and rails are made of aluminium.
